FRONTEND ENGINEER & AI ENGINEER

PROFESSIONAL SUMMARY

An ambitious, rapid-learning Frontend Engineer and aspiring AI Engineer with a proven track record of mastering modern web technologies and AI developer tools within an accelerated timeframe. Experienced in building responsive e-commerce and healthcare-domain applications, managing global state, integrating REST and AI APIs, and leading cross-functional teams from concept to MVP.

TECHNICAL SKILLS

Core Languages: JavaScript (ES6+), Python, HTML5

Frameworks & Libraries: React.js, Tailwind CSS, Zustand

Technical Architectures: REST API Integration, React Auth Context, Client-Side Routing (React Router), AI Model Integration

Developer Tools: Git, GitHub, Claude Code AI, Vercel, Firebase

PROFESSIONAL EXPERIENCE & TECHNICAL PROJECTS

Frontend Engineering Intern — Rad5 Tech Hub

Jan 2026 – Present

Aba, Abia State, Nigeria

NaijaCounts — AI-Powered Nigerian Food Calorie Counter (MVP) | Lead Software Developer

Problem: Nigerian and African cuisine is underserved by existing calorie-tracking apps, which lack accurate, culturally relevant food recognition.

Action: Founded and led development of an MVP using React, Zustand, Tailwind CSS, and Vite, integrating Google Gemini for AI-powered dish recognition with multi-model fallback for reliability.

Result: Built a functional MVP that lets users photograph a dish and instantly receive an AI-generated calorie and nutrition breakdown.

EMR (Electronic Medical Records) System — Capstone Project | Lead Software Developer

Problem: Designing a digital Electronic Medical Records system as a cross-functional capstone deliverable.

Action: Led frontend development with React, JavaScript, and Tailwind CSS, coordinating with UI/UX designers, data analysts, and marketers on the team.

Result: Delivered a working EMR capstone project, demonstrating team leadership and end-to-end frontend ownership.

E-Commerce Platform (Jumia Replica)

Problem: Developing a scalable e-commerce frontend with secure client-side authentication and complex product catalogs.

Action: Engineered the platform using React.js and Tailwind CSS with React Auth Context, client-side routing, and live API integration.

Result: Delivered a production-ready application demonstrating advanced state management and seamless navigation.

Additional Projects

Built and deployed a suite of data-driven applications — including a Recipe Locator, Country Directory, Pokémon Database Tracker, To-Do List app (Vercel + Firebase), Calculator app, and Collaborative Notepad — using React, JavaScript, and Tailwind CSS.

EDUCATION & CREDENTIALS

Frontend Engineering Program — Rad5 Tech Hub

Expected July 2026

Core Focus: Advanced React application architecture, state utilization, and ecosystem optimization.

AI Engineering & Python for AI — Coursera / RAD5 Tech Hub x WeCreateTech TECHCERT Program 2026

Google AI Essentials Specialization — Coursera

Claude Code AI Coursework — Advanced Technical AI Certification

Completed May 2026

West African Senior School Certificate (WASSCE) — Secondary School Graduation

May 2025
